```
The invention relates to methods and compositions for diagnosing and treating Pseudoxanthoma elasticum (PXE) and PXE associated physiological dysfunctions. The invention is useful for screening for the presence of a PXE mutation. Mutations associated with PXE maps to the ATP-binding cassette transporter ABCC6 (MRP6 maps to the ATP-binding consette transporter ABCC6 (MRP6 maps associated protein cassette transporter ABCC6 (MRP6) gene encodes a 165 kba protein located in the plasma membrane containing 17 membrane - spanning chalces grouped into three transmembrane domains. PXE is inherited as an autosomal recessive phenotype or appears as a sporadic phenotype. PXE is a heritable disorder characteried by mineralisation of elastic fibers in skin, arteries and the retina, that result in dermal lesions with associated laxity and loss of elasticity, arterial insufficiency, associated MRP6 alleles who are then provided with appropriate genetic degeneration. The method is useful for screening a population of individuals in order to identify individuals with one or more PXE individuals in view of the PXE status. The methods are useful for counselling in view of the PXE status. The methods are useful for disanosis. The present sequence is human ATP-binding cassette (ABC) transporter, ABCC6 (MRP6) protein. Note: The present conditional cassette transporter abcc6 (MRP6) protein. Note: The present fransporter faint of ABCC6 (MRP6) protein. Note: The present france is not shown in the specification but is derived from human ATP-finner 3 of the present protein. ABCC6 (MRP6) protein. Note: The present protein and present fransporter. ABCC6 (MRP6) protein (SED ID NO: 3) shown in the specification of the protein (ABCD).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                identifying homozygotes, compound heterozygotes or carriers involves determining presence of mutation in MRP6 (ABCC6) nucleic acid.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Screening presence of Pseudoxanthoma elasticum mutation useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         figure 3 of the specification (AAE09361)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Claim 13; Page; 163pp; English.

                                                                                                                                                                                  ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        treating Pseudoxanthoma elasticum (PKE) and PKE associated physiological dysfunctions. The invention is useful for screening for the presence of a dysfunctions. The invention is useful for screening for the presence of a PKE mutation. Mutations associated with PKE maps to the ATP-binding cassette transporter ABCG6 (MRP6 Multidrug Resistance associated protein-protein located in the plasma membrane containing 17 membrane-spanning helices grouped into three transmembrane containing 17 membrane-spanning autosomal recessive phenotype or appears as a sporadic phenotype. PKE is a heritable disorder characterised by mineralisation of elastic fibers in skin, arterial adsorder characterised by mineralisation of elastic fibers in skin, arterial adsorder characterised by mineralisation of elastic fibers in skin, arterial disease and the retinal the memorrhages leading to macular degeneration. The method is useful for screening a population of individuals in order to identify individuals with one or more PKE individuals in order to identify individuals with one or more PKE seconselling in view of the PKE status. The methods are useful for counselling in view of the PKE status. The methods are useful for counselling in view of the PKE status. The methods are useful for counselling in view of the PKE status. The methods are useful for carriers and thus are

The invention is useful for screening for the presence of a PXE mutation. Mutations associated with PXE maps to the ATP-binding cassette transporter ABCC6 (MRF6-Multidrug Resistance associated protein 6) gene locus on chromosome 16. ABCC6 (MRP6) gene encodes a 165 kDa protein located in the plasma membrane containing 17 membrane- spanning helices grouped into three transmembrane domains. PXE is inherited as an autosomal recessive phenotype or appears as a sporadic phenotype. PXE is a heritable disorder characterised by mineralisation of elastic fibers in
useful in the area of genetic testing, carrier detection and prenatal diagnosis. The present sequence is human ATP-binding cassette (ABC) transporter, ABCC6 (WRP6) G1302R mutant protein. Note: The present sequence is not shown in the specification but is derived from human ATP-binding cassette transporter ABCC6 (WRP6) protein [SED ID NO: 3] shown in figure 3 of the specification (AAB09361)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human, prenatal diagnosis, dermal lesion, cardiovascular disease, MRP6, whitidrug Resistence-associated protein 6; macular degeneration, ABCC6; ATP-binding cassette transporter; arterist insufficiency; chromosome 16; Pseudoxanthoma elasticum; PXE; heritable disorder; retinal haemorrhage;
                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           identifying homozygotes, compound heterozygotes or carriers involves determining presence of mutation in MRP6 (ABCC6) nucleic acid.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Screening presence of Pseudoxanthoma elasticum mutation useful for

skin, arteries and the retina, that result in dermal lesions with associated laxity and loss of elasticity, arterial insufficiency, cardiovascular disease and retinal haemorrhages leading to macular degeneration. The method is useful for screening a population of individuals in order to identify individuals with one or more PXE associated MRP6 alleles who are then provided with appropriate genetic counsalling in view of the PXE status. The methods are useful for identifying homozygotes, compound heteroxygotes or carriers and thus are useful in the area of genetic testing, carrier detection and prematal diagnosis. The present sequence is human ATP-binding cassette (ABC) transporter, ABCC6 (MRP6) Al303P mutant protein. Note: The present sequence is hown in the specification but is derived from human ATP-binding cassette transporter ABCC6 (MRP6) protein [SED ID NO: 3] shown in figure 3 of the specification (AAE09361)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           а
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 1935, Application US/09248796A

Patent No. 6747137

GENERAL INFORMATION:
APPLICANT: Keith Weinstock et al
TITLE OF INVENTION:
FOR DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION: FOR DIAGNOSTICS AND THERAPEUTICS
CURRENT APPLICATION NUMBER: US/09/248,796A
CURRENT PILING DATE: 1999-02-13
PRIOR APPLICATION NUMBER: US 60/074,725
PRIOR APPLICATION NUMBER: US 60/096,409
SEQ ID NO 19350
                                                                                                  US-09-071-035-406

Sequence 406, Application US/09071035

Sequence 406, Application US/09071035

Sequence 406, Application US/09071035

Patent No. 6448043

TITLE OF INTERNITY Gil H. Choi

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

FUNCTION: May participate directly in the active transport of drugs into subcellular organelles or influence drug distribution indirectly (By similarity). SUBCELLULAR LOCATION: Integral membrane protein (By similarity). SIMILARITY: Belongs to the ABC transporter family. MRP subfamily.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ATP (Forential).

Indirectly. Transports glutathione conjugates as Leukotriene-c4 (ITC4) and N-ethylmaleimide S-glutathione (NEM-GS).
SUBCELLULAR LOCATION: Integral membrane protein (By similarity).
FISSUE SPRCIFICITY: Sapressed in Kidney and liver. Very low expression in other tissues.
DISEASE: Defects in ABCC6 are a cause of autosomal dominant pseudoxanthoma alasticum (AD-PSE) [MIMI-77850]. PXE is a disorder characterized by calcification of elastic fibers in skin, arteries and retina that results in dermal lesions with associated laxity and loss of elasticity, arterial insufficiency and retinal hemorrhages leading to macular degeneration.
DISEASE: Defects in ABCC6 are a cause of autosomal recessive pseudoxanthoma elasticum (AR-PSE) [MIM:264800].
SIMILARITY: Belongs to the ABC transporter family. MRP subfamily.
CAUTION: Ref. 2 sequence differs from that shown due to erroneous generation.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This SWISS-PROT entry is copyright. XX New isolated peptide that inhibits VEGF-C and VEGF-D, useful for diagnosing, evaluating, treating disorders mediated by VEGFR-3 activity, recent and diseases of necovascularization.

XX New isolated peptide that inhibits veger and isolated peptide (I) that binds to and chapted and creating disorders mediated by VEGFR-3.

YX New isolated peptide that inhibits will actor receptor 3 (VEGFR-3).

YX New isolated peptide that inhibits growth factor receptor 3 (VEGFR-3).

YX New isolated peptide that inhibits and can be used in gene therapy.

C inhibits vascular endothelial growth factor receptor 3 (VEGFR-3).

YX The resent invention describes and can be used in gene therapy.

C antidiabutic and wulnerary activities and can be useful for chaptoric and treating disorders mediated by the activity of the cell surface receptor VEGFR-3 such as cancer; e.g. brain, lung, the cell surface receptor VEGFR-3 such as cancer; e.g. brain, lung, lung, lung, lung, lung.

(I) have cytostatic, hepatotropic, antiinflammatory, hypotensive, antidiabetic and vulnerary activities, and can be used in gene therapy. Compositions and methods from the present invention are useful for diagnosing, evaluating and tracting disorders mediated by the activity of the cell surface receptor VEGFR-3 such as cancer, e.g. brain, lung,
          pancreas, colon, stomach, breast, endometrium, prostate, testicle, ovary, skin, head and neck, oesophagus, bone, marrow or blood, and diseases of neovascularisation, e.g. liver diseases, hypertension, post-trauma, chronic hepatitis, haemangiomas and diabetes. The present sequence represents a specifically claimed VEGFR-3 binding peptide from the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New isolated peptide that inhibits VEGF-C and VEGF-D, useful for diagnosing, evaluating, treating disorders mediated by VEGFR-3 activity, such as cancer and diseases of neovascularization.

(I) have cytostatic, hepatotropic, antiinflammatory, hypotensive, antiidabetic and vulnerary activities, and can be used in gene therapy. Compositions and methods from the present invention are useful for diagnosing, evaluating and treating disorders mediated by the activity of the cell surface receptor VBGFR-3 such as cancer, e.g. brain, lung,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Vascular endothelial growth factor receptor 3 inhibitor; VBGFR-3; angiogenesis; lymphangiogenesis; vascular endothelial growth factor; cytostatic; hepatotropic; antiinflammatory; hypotensive; antidiabetic; vulnerary; cell surface receptor; cancer; neovascularisation; liver disease; hypertension; post-trauma; chronic hepatitis; haemangioma; diabetes; PDGF; platelet derived growth factor.
pancreas, colon, stonach, breast, endometrium, prostate, testicle, ovary, skin, head and neck, oesophagus, bone, marrow or blood, and diseases of encovascularisation, e.g. liver diseases, hypertension, post-trauma, chronic hepatitis, haemangiomas and diabetes. The present sequence represents a specifically claimed VEGFR-3 binding peptide from the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New isolated peptide that inhibits VEGF-C and VEGF-D, useful for diagnosing, evaluating, treating disorders mediated by VEGFR-3 activity, such as cancer and diseases of neovascularization.
                                                                                                                                                                                                                                                                                                                                                                                                 Gaps

targeting peptide of the invention

```
The invention comprises a method (BRASIL - Biopanning and Rapid Analysis of Selective Interactive Ligands) to obtain a targeting peptide. The BRASIL method of the invention involves: exposing a target to a phage display library in a first phase; exposing the first phase to a second phase; and separating the phase bound to the target from unbound phage. The BRASIL method of the invention allows cell phages to be separated from the remaining unbound phage in a single differential centrifugation step. When compared to conventional cell panning methods, the BRASIL method shows a significant increase in recovery of specific phage and a substantial decrease in background. The BRASIL method is useful for identifying targeting peptides. The targeting pictides identified by the method of the invention are useful for treating disease states, such as: cidabetes; inflammatory arthritis; atherosclerosis; cancer; autoimmune disease; bacterial infection; vixal infection; cardiovascular disease and degenerative disease. The present amino acid sequence represents a
                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   BRASIL; targeting peptide; bacterial infection;

The invention comprises a method (BRASIL - Biopanning and Rapid Analysis of Selective Interactive Ligands) to obtain a targeting peptide. The SRASIL method of the invention involves: exposing a target to a phage display library in a first phase; exposing the first phase to a second phase; and separating the phage bound to the target from unbound phage. The BRASIL method of the invention allows cell phages to be separated from the remaining unbound phage in a single differential centrifugation step. When compared to conventional cell panning methods, the BRASIL method shows a significant increase in recovery of specific phage and a substantial decrease in background. The BRASIL method is useful for cidentifying targeting peptides. The targeting peptides identified by the method of the invention are useful for treating disease states, such as: diabetes; inflammatory arthritis; atherosclerosis; cancer; autoimmune disease; bacterial infection; viral infection; cardlovascular disease and degenerative disease. The present amino acid sequence represents a targeting peptide of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention comprises a method (BRASIL - Biopanning and Rapid Analysis of Selective Interactive Ligands) to obtain a targeting peptide. The BRASIL method of the invention involves: exposing a target to a phage display library in a first phase; exposing the first phase to a second phase; and separating the phage bound to the target from unbound phage. The BRASIL method of the invention allows cell phages to be separated from the remaining unbound phage in a single differential centrifugation step. When compared to conventional cell panning methods, the BRASIL method shows a significant increase in recovery of specific phage and a substantial decrease in background. The BRASIL method is useful for identifying targeting peptides. The targeting peptides identified by the method of the invention are useful for treating disease states, such as: diabetes; inflammatory arthritis; atherosclerosis; cancer; autoimmune disease; bacterial infection; viral infection; cardiovascular disease and the invention of the invention acid sequence represents a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö

The present amino acid sequence represents a targeting peptide of the invention
The invention comprises a method (BRASIL - Biopanning and Rapid Analysis of Selective Interactive Ligands) to obtain a targeting peptide. The BRASIL method of the invention involves: exposing a target to a phage display library in a first phase; exposing the first phase to a second phase; and separating the phage bound to the target from unbound phage. The BRASIL method of the invention allows cell phages to be separated from the remaining unbound phage in a single differential centrifugation step. When compared to conventional cell panning methods, the BRASIL method shows a significant increase in recovery of specific phage and a substantial decrease in background. The BRASIL method is useful for identifying targeting peptides. The targeting peptides identified by the method of the invention are useful for treating disease states, such as:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        .,

The present invention describes an isolated peptide (I) that binds to and inhibits vascular endothelial growth factor receptor 3 (VEGR-3). (I) and cytostatic, hepatotropic, antiinflammatory, hypotensive, antiidabetic and vulnerary activities, and can be used in gene therapy. Compositions and methods from the present invention are useful for the cell surface receptor VEGR-3 such as cancer, e.g. brain, lung, there, spleen, kidney, lymph node, such as cancer, e.g. brain, lung, pancreas, colon, stomach, breast, endometrium, prostate, testicle, ovary, skin, head and nock, oesophagus, bone, marrow or blood, and diseases of neovascularistion, e.g. liver diseases, hypertension, post-trauma, chronic hepatitis, haemangloms and diabetes. The present sequence represents a specifically claimed VEGR-3 binding peptide from the
                                                                              Vascular endothelial growth factor receptor 3 inhibitor; VEGFR-3; anglogenesis; lymphangiogenesis; vascular endothelial growth factor; cytostatic; hepatotropic; antiinflammatory; hypotensive; antidiabetic; vulnerary; cell surface receptor; cancer; neovascularisation; liver disease; hypertension; post-trauma; chronic hepatitis; haemangioma; diabetes; PDGF; platelet derived growth factor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New isolated peptide that inhibits VEGF-C and VEGF-D, useful for diagnosing, evaluating, treating disorders mediated by VEGFR-3 activity, such as cancer and diseases of neovascularization.
                                                VEGFR-3 binding peptide SEQ ID NO:67.

the intervalue intervalue of the feature of the containing periode into peptide-containing targeting vectors for use in clinical positron containing targeting vectors for use in clinical positron (fluorine-18 (F-18) comprises reacting a peptide comprising a free thiol group with a labeling reagent of formula: 18F (CH2)m-CRIR2-(CH2)n-X, or a fluorinated alkene in which at least one of the two double bonded carbon atoms bears at least one leaving group comprising I, Br, Cl, azide, cosylate, mosylate, nosylate, nosylate, insylate, insylate, maleimide CC (optionally substituted by 1-2 alkyl) or 3-sulfomaleimide; R1, R2 = I, CR, azide, tosylate, mesylate, nosylate, triflate, m, COM1, COM1, CM sulfonic acid, tertiary ammine, which is used for Radiolabeling peptide-containing targeting vectors such as proteins, antibodies, and R' = 1-6C alkyl or conferency ammonium, COOR', CONR'2 or COR'; and R' = 1-6C alkyl or conferency menonium, coor antibodies, antibody fragments and receptor-cc targeted peptides for use in routine clinical positron emission conferency of the free thiol groups which are rapidly alkylated at contraining and efficient. The method uses the cunique property of the free thiol groups which are rapidly alkylated at contraining a samples of F-18 labeled peptides used in the method of detecting a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to a method for incorporating 18F radionuclide into

This sequence represents an immunogenic peptide for a bi-specific antibody. The invention relates to a method of treating or identifying diseased tissues in a patient comprising administering a bi-specific antibody (or fragment) having at at least 1 arm (A) that specifically binds a targeted tissue and at least 1 arm (B) that specifically binds a targetable conjugate. The methods and bi-specific antibodies and tusion proteins are useful for pre-targetling methods of diagnosis and therapy. It is advantageous to raise bi-specific antibodies against a targetable conjugate that is capable of carrying at least 1 diagnostic or therapeutic agent. The characteristics of the chelator, metal chelate complex, therapeutic agent or diagnostic agent can be varied to accommodate differing applications without raising new bi-specific antibodies for each new application. The targetable conjugate is selected to elicit sufficient immune responses and also for rapid in vivo clearance when used within the bi-specific antibody targeting method

(I) have cytostatic, hepatotropic, antiinflammatory, hypotenaive, antidiabetic and vulnerary activities, and can be used in gene therapy. Compositions and methods from the present invention are useful for the cell surface receptor VBGFR-3 such as cancer, e.g. brain, lung, liver, spleen, kidney, lymph node, small intestine, blood cells, pancreas, colon, stomach, breast, endometrium, prostate, testicle, ovary, skin, head and neck, oesophagus, bone, marrow or blood, and diseases of neovascularisation, e.g. liver diseases, hypertension, post-trauma, chronic hepatitis, haemanglomas and diabetes. The present sequence in present a specifically claimed VBGFR-3 binding peptide from the
                                                                                                                                                                                                                                                                                                   Vascular endothelial growth factor receptor 3 inhibitor; VEGFR-3; angiogenesis; lymphangiogenesis; vascular endothelial growth factor; cytostatic; hepatotropic; antiinflammatory; hypotensive; antidiabetic; vulnerary; cell surface receptor; cancer; neovascularisation; liver disease; hypetrension; post-trauma; chronic hepatitis; haemangioma; diabetes; PDGF; platelet derived growth factor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New isolated peptide that inhibits VEGF-C and VEGF-D, useful for diagnosing, evaluating, treating disorders mediated by VEGFR-3 activity, such as cancer and diseases of neovascularization.

                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to targeting an agent towards a target site in a tissue, comprising administering to the tissue, a multi-specific antibody or its fragment, comprising a targeting arm that binds to an antigen of the target site and a capture arm that binds to an antigen of administering a polymer conjugate that binds to the capture arm, the conjugate has a polymer conjugate to the agent such as therapeutic agent, a peptide, an enzyme and alabelled ligand. Also included is a kit useful for targeting a target site within a tissue in a subject or tissue sample comprising the above mentioned multi-specific antibody or its fragment and a polymer conjugate. The method is used for targeting an agent towards a target site in a tissue (e.g. a tumour). The method is also useful for therapputic or diagnostic purposes and further in photodynamic therapy. The present sequence is an immunogenic peptide used
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Targeting an agent towards a target site in a tissue, by administering in a tissue, a multi-specific antibody or its fragment and a polymer conjugate that binds to the capture arm of the multi-specific antibody.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          photodynamic diagnosis; cancer; tumour; cardiovascular lesion; inflammatory disease; neurodegenerative disease; metabolic disease; infectious disease; B-cell malignancy; Alzheimer's disease; amyloidosis; autoimmune disease; bacterial infection; fungal infection; parasitic infection; viral infection; carcinoembryonic antigen-expressing tumour.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Treating cancer and metabolic diseases by administering a multi-specific antibody having a targeting arm that binds to an antigen and a capture arm that binds to a polymer conjugate comprising a therapeutic agent.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to a method of diagnosing or treating a disease or discorder. The method involves administering to a tissue a multi-specific antibody (I) or antibody fragment, comprising a targeting arm that binds to an antigen on the target site, and a capture arm that binds to a
                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            /note= "Optionally Cysteinyl; if Cys the residue is methylated; N-terminal acetylated."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       /note= "Optionally Cysteinyl; if Cys the residue is methylated; N-terminal acetylated."

Sequence 8 AA;

Debymer conjugate, and administering to the tissue a polymer conjugate confidencing and conjugate to a disease and the popular general pages of the polymer conjugate to a disease of disease or disease or disorder the method is receipted as a confidencial controlled to a disease or disorder chosen from cancer (coephoged), agertic, colonic, creetal, pencientic, many breast, overlan, utilizary bladder, endometrial, certal, pencientic, many breast, overlan, utilizary bladder, endometrial, certal, pencientic, many breast, overlan, utilizary bladder, endometrial, certal, pencientic, many breast, overlan, utilizary bladder, endometrial, certal, pencientic, many breast, overlan, utilizary bladder, endometrial, certal, pencientic, many breast, overlan, utilizary bladder, endometrial, certal, pencientic, many breast, overlan, utilizary bladder, endometrial, certal, pencientic, many defense, endometrial, certal, pencientic, many defense, endometrial, pencientic, many defense, endometrial, pencientic, many defense, endometrial, pencientic, pencie a mycoplasma chosen from Mycoplasma arthritidis, M. hyorhinis, M. orale, M. arginini, Acholeplasma laidlawii, M. salivarum and M. pneumoniae. The cancer is preferably chosen from carcinoembryonic antigen (CEA)-expressing tumour or a CD20-expressing malignancy. The present sequence represents a peptide used in the method of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to modulating agents for inhibiting or enhancing desmosomal cadherin mediated cell adhesion, comprising a modulating agent comprising a desmosomal cadherin cell adhesion recognition CAR sequence (ABB45341-ABB47262), a non-peptide mimetic of a desmosomal cadherin CAR sequence, a substance such as an antibody or antigen-binding fragment that specifically binds a desmosomal cadherin CAR sequence and/or a polymucleotide encoding a polypeptide that comprises a desmosomal cadherin CAR sequence or analogue. The modulating agents have immunosuppressive, cytostatic and antiapoptotic activity and are used to facilitate wound healing and/or reduce scar tissue, for enhancing adhesion of foreign tissue implants (e.g. skin graft or organ implant), treating an autoimmune blistering disorder and to treat cancer (e.g. carcinoma, leukaemia or melanoma) and induce apoptosis
                                                                                                                                                                                                                                                                                                                Desmosomal cadherin; cell adhesion; CAR sequence; immunosuppressive; cytostatic; antiapoptotic; wound healing; reduce scar tissue; skin graft; organ implant; autoimmune blistering disorder; cancer; apoptosis; cyclic.

The invention relates to modulating agents for inhibiting or enhancing desmosomal cadherin mediated cell adhesion, comprising a modulating agent comprising a desmosomal cadherin call adhesion recognition CAR sequence (ABB45341-ABB47262), a non-peptide mimetic of a desmosomal cadherin CAR sequence, a substance such as an antibody or antigen-binding fragment that specifically binds a desmosomal cadherin CAR sequence and/or a polynucleotide encoding a polypeptide that comprises a desmosomal cadherin CAR sequence or analogue. The modulating agents have immunosuppressive, cytostatic and antiapoptotic activity and are used to facilitate wound healing and/or reduce scar tissue, for enhancing adhesion of foreign tissue implants (e.g. skin graft or organ implant), treating an autolimmune blistering disorder and to treat cancer (e.g. carcinoma, leukaemia or melanoma) and induce apoptosis
                                                                                                                                                                    Desmosomal cadherin; cell adhesion; CAR sequence; immunosuppressive; cytostatic; antiapoptotic; wound healing; reduce scar tissue; skin graft; organ implant; autoimmune blistering disorder; cancer; apoptosis; cyclic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Modulating agents for inhibiting or enhancing desmosomal cadherin mediated cell adhesion, useful for facilitating wound healing and/or reducing scar tissue, treating cancer and inducing apoptosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gour BJ;

US-09-572-404B-1454
US-09-572-404B-1454
; Sequence 1454, Application US/09572404B
; Sequence 1454, Application No. US20030078374A1
; GENERAL INFORMATION:
    APPLICANT: Proteom Ltd
; TILLE OF INVENTION: Complementary peptide ligands from the human genome
; FILE REFRENCE: Human patent
; CURRENT APPLICATION NUMBER: US/09/572,404B
; CURRENT FILING DATE: 2000-05-17
; NUMBER OF SEQ ID NOS: 4203
; SEQ ID NO 1454
; LENGTH: 10
APPLICANT: Weng, Zhiping
TITLE OF INVENTION: METHODS FOR DESIGNING MOLECULAR CONJUGATES AND
TITLE OF INVENTION: METHODS FOR DESIGNING MOLECULAR CONJUGATES AND
TITLE OF INVENTION: COMPOSITIONS THEREOF
FILE REFERENCE: BU-035AX
GURRENT APPLICATION NUMBER: US/10/133,210
CURRENT PILING DATE: 2002-04-26
NUMBER OF SEQ ID NOS: 281
SOFTWARE: Patentin Ver. 2.0
SOFTWARE: Patentin Ver. 2.0
GRANTH: 10
TYPE: PRT
CORGANISM: Attificial Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
